# Database Runbook

Short Description

This playbook starts MariaDB and its services.

Required Software

- Vagrant
- Ansible
- MariaDB
- SELinux
- Php
- nginx

Architecture Diagram

Deployment

To deploy the software, start a vm and/or any host that is able to run ansible and vagrant.
From Vagrant:

1. Install Vagrant on the host machine
2. "Vagrant up" to start a VM

3. "Ssh-config" to be able to ssh into the VM from the host
4. Install and configure Ansible of the host machine
5. Execute the command "ansible-playbook -i hosts.ini db.yml" to start the service
6. Execute the command "ansible-playbook -i hosts.ini web.yml" to start the service
